

Designed in conjunction with UI and UX specialists, client surveys, and our own expertise and insights into the direction of the resource planning space, Retain International has launched Version 7.2 to bring you an even more enhanced experience.

## More manageable planner

With a more user-friendly and navigable planner, Version 7.2 brings you:

- **greater visibility** when moving bookings;
- easier to **search against specific time ranges** for consolidated views for definable time around project planning; and
- the ability to **zoom into specific days** for more visibility into project specifics.

## Marketplace

The internal job board that empowers your staff

Our new **"Marketplace"** add-on module offers an area for resources to apply for roles, enabling:

- resources to **detail preferences and areas of interest** they are keen to develop, thus enabling them to work in and be considered for interest areas;
- **increased client satisfaction and staff retention** through consideration of resources for different jobs;
- resources to **share jobs to other colleagues or apply directly**;
- resources to **drag and drop profile documents into "Talent Profile"**, such as certificates, work examples and so on.

### Marketplace

## Skills

Power your People Search

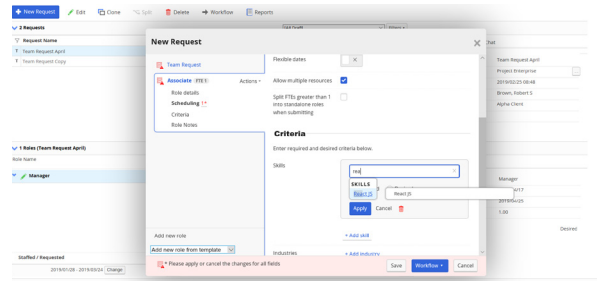

Within Retain International's **"Skills"** module, resources are able to **tag skills and interests** within their profile. In turn, this powers skills and interest matches within People Search, **facilitating a more appropriate talent pool** to find the ideal resource for a job or project.

## Teams

### Build your team faster & more easily

Retain International's "Teams" add-on module helps speed up the process between demand creation and demand fulfilment via:

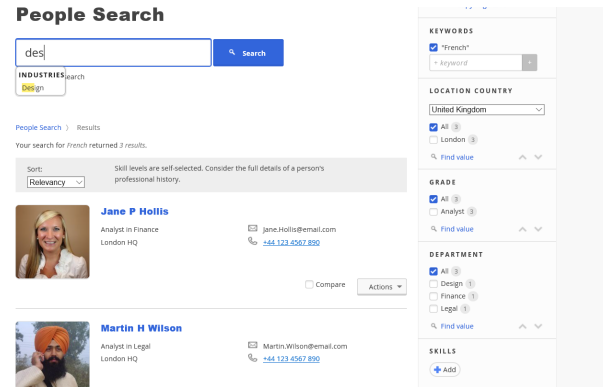

- **identification of gaps** in resource planning;
- the facilitation of dialogue between the requester and resource manager/ talent manager;
- the ability for planners, schedulers or the like to **request staff against specific criteria** – desired vs. required skills
- users to view **speculative team bookings** and the ability to auto-schedule resources, including duplicating and splitting demand to save time.

## People Search

### Search & compare your perfect profiles

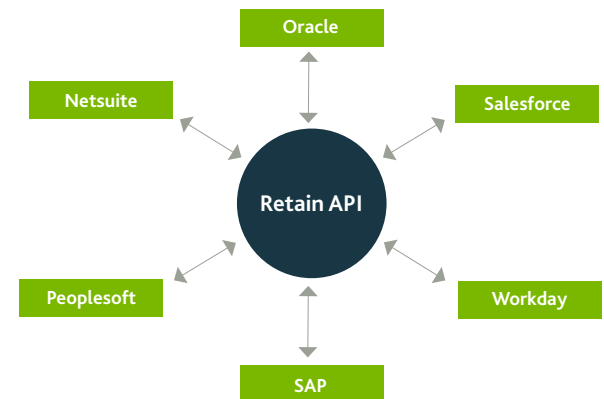

The "People Search" capability enables resource planners, schedulers or requestors to search for resources with specific skills or who have expressed specific interest areas they are keen to develop (which have been tagged within the "Skills" module). Additionally, resource planners or schedulers can **identify trending skills** and even **compare and export profiles** to others.

## API

### Connect your data with Retain API

The Retain API enables integration with existing business systems. Typical integrations may import personnel information, job data, actual time spent on engagements or export Retain data into a data warehouse.

### Additional features include

- Add photos to profiles
- Localise language settings
- Scheduling reports
- Notifications
- GDPR Consent / Data controls
- Visualisations
- Easily expandable and collapsible rows in table view
- SQL 2016 server support

For more information on all of the new features and to arrange a demo of Version 7.2, please contact the sales team by emailing [sales@retaininternational.com](mailto:sales@retaininternational.com) or by calling +44 20 7538 4774
